

Big Data Training

Data training will help you make better decisions, find critical insights, and use today's analysis tools to maximize the value of available information. Our data training courses will equip you with the skills you need to become business analysts, project managers, and department or division managers.

INTRO TO DATA ANALYSIS BOOT CAMP:

- ▶ Measure performance and improvement of opportunities for business processes
- ▶ Review the basic principles, properties, and applications of Probability Theory
- ▶ Discuss data distribution including Central Tendency, Variance, Normal Distribution, and non-normal distributions

DATA ANALYSIS BOOT CAMP:

- ▶ Practice creating a valuable array of plots and charts to reveal hidden data trends and patterns
- ▶ Understand and leverage different distribution models with real world applications
- ▶ Form and test hypotheses using multiple methods to define and interpret useful predictions

BIG DATA BOOT CAMP:

- ▶ Learn about the various technologies that comprise the Hadoop ecosystem
- ▶ Use Hadoop to identify new business opportunities, improve data management processes, and clarify results
- ▶ Scale your current workflow to handle more users and lower overall performance cost

WHAT OUR STUDENTS ARE SAYING:

“The instructor was both personable and knowledgeable, and always took time with us whenever we had questions or comments. Absolutely excellent in their presentation, they really brought context to the material and how it could work in our real world environment.”
-Vincent. V. (May 2018)

“I enjoyed that this was not just a “read from the slides” training. There was plenty of actual teaching. Appreciated the notes on subjects that were encountered on the exams as well.”
-Gabriel S. (July, 2018)

“The most knowledgeable instructor I've trained under in years. Very nicely presented.”
-Terry S. (August, 2018)
